👤 mohamedhassan2004.github.io/My-Portfolio

Summary

Junior Backend .NET Developer with practical experience building scalable APIs and real-time systems using ASP.NET Core and Clean Architecture. Strong problem-solving background demonstrated by solving 300+ DSA problems across LeetCode and Codeforces.

Education

Bachelor of Computer Science and AI (2022 – Present)
Helwan University, Cairo, Egypt
GPA: 3.48/4.0 (Excellent)

Experience

Digital Egypt Pioneers Initiative – DEPI (Nov 2024 – May 2025)
Full Stack .NET Development trainee

- Developed scalable backend features using C#, ASP.NET Core MVC, and RESTful APIs within a team-based development environment.
- Implemented authentication and role-based authorization using ASP.NET Core Identity and JWT tokens.
- Applied SOLID principles and layered (N-Tier) architecture to improve maintainability and separation of concerns.
- Designed database schemas and optimized queries using Entity Framework Core.
- Collaborated using Git workflows including branching, pull requests, and code reviews.

Projects

Socialify — Social Media Platform (.NET Core MVC, Clean Architecture) 🔗
<https://github.com/MohamedHassan2004/Socialify>

Tech Stack: ASP.NET Core MVC, C#, SQL Server, EF Core, SignalR, MediatR, Serilog, Mapperly, Clean Architecture

- Built a full-featured social platform supporting 20+ core user interactions including posting, commenting, reactions, and friend management.
- Implemented global exception handling and structured logging using Serilog, improving debugging efficiency and system monitoring.

- Optimized database performance using custom pagination and filtering for large datasets.
- Improved object mapping performance by ~30% by replacing reflection-based mapping with Mapperly (compile-time mapping).
- Secured endpoints using ASP.NET Identity with authentication and authorization workflows.

Marketplace (.NET Core Web API, N-Tiers Architecture) 🔗

<https://github.com/MohamedHassan2004/Marketplace>

Tech Stack: ASP.NET Core Web API, EF Core, SQL Server, JWT, WebSockets

- Designed and developed a multi-role marketplace backend supporting vendors and customers.
- Implemented product management, cart, order processing, and secure JWT authentication.
- Added real-time notifications using WebSockets for order updates and system events.
- Applied layered architecture and repository patterns to maintain scalable code structure.

Skills

- **Backend & APIs:** C#, .NET Core, ASP.NET Web API, ASP.NET MVC, LINQ
- **Architecture & Design:** Clean Architecture, N-Tier Architecture, Repository Pattern, Specification Pattern, Unit of Work, SOLID Principles, OOP
- **Databases:** SQL Server, PostgreSQL, Entity Framework Core, Database Design (ERD)
- **Security & Real-Time:** JWT & Refresh Tokens, ASP.NET Identity, SignalR, WebSockets
- **Frontend (Working Knowledge):** Angular, TypeScript, Tailwind CSS, Bootstrap
- **Tools & Practices:** Git, GitHub, REST API Design, Debugging, Unit Testing Basics

Problem Solving & Competitive Programming

- Solved **300+ Data Structures & Algorithms problems** on LeetCode, Codeforces, and Codewars.
- Strong understanding of algorithms, complexity analysis, and common problem-solving patterns (two pointers, sliding window, recursion, dynamic programming).
- Regular practice using C# to improve algorithmic thinking and coding efficiency.

<https://leetcode.com/u/Logan99x>

Certifications

- Full Stack .NET Development – DEPI – May 2025
- McKinsey Forward Program – McKinsey & Company – July 2025
